Cover Letter

Dear Hiring Team at Chatarmin.com,

I have been closely following the growth of intelligent communication solutions, and I am highly enthusiastic about the **Design Engineer** opportunity at **Chatarmin**. Currently pursuing a degree in Computer Engineering at Unisul, I have built a solid background that merges hardware development (IoT/embedded systems) with backend software architecture using Golang and C#. I believe this holistic view—connecting structural logic with the final product experience—qualifies me to add immediate value to your automation solutions.

Although my recent focus has been heavily concentrated on backend development, high-performance APIs, microservices with Docker, and data modeling, I view the role of a Design Engineer as the perfect bridge between technical engineering and functional product design. In my previous role at Wavetech, I led the optimization of graphical user interfaces (GUIs) using WPF/C# for device calibration. This delivery directly reduced technical service times and significantly improved user workflow. Additionally, I manage end-to-end architectures utilizing AWS Cloud (Lambda, DynamoDB) and HTTP/HTTPS protocol integrations. These skills are essential for scaling the omnichannel workflows and integrations that Chatarmin offers.

My ability to conceptualize, design, and test robust solutions is also reflected in my open-source initiatives. A prime example is the lilygo-vehicle-tracking ecosystem, which integrates hardware data collection with clean API structuring. With a strong focus on methodologies like TDD and CI/CD pipelines, I always strive to ensure that the engineering behind the product is just as clean and efficient as the interface the end-user interacts with.

I am fully motivated to apply my energy, resilience, and multidisciplinary skills to grow alongside Chatarmin's products. My detailed resume is attached for your review. I welcome the opportunity for a technical interview to discuss how I can apply my background to the company's current challenges.

Thank you for your time and consideration.

Sincerely,

Lucas Lorenzo Alves
